34 Seasonal & Festival Campaign Activation Protocol
35 Daily & Weekly Store Operator Checklists

36 Troubleshooting Common Operational Inquiries

SECTION A: CUSTOMER WEBSITE GUIDE

This section provides store operators, customer service executives, and managers with an exact visual reference of the customer-facing e-commerce storefront, explaining how customers discover products, place orders, and track fulfillment.

01. Brand Positioning, Homepage & Heritage Story

ZaDa Foods is positioned as a **premium Kerala food brand** celebrating authentic culinary heritage. The catalogue highlights *Spices and Spice Blends*, *Whole & Ground Spices*, *Traditional Kerala Ingredients*, and *Authentic Cooking Essentials*, supported by heritage snack specialities.

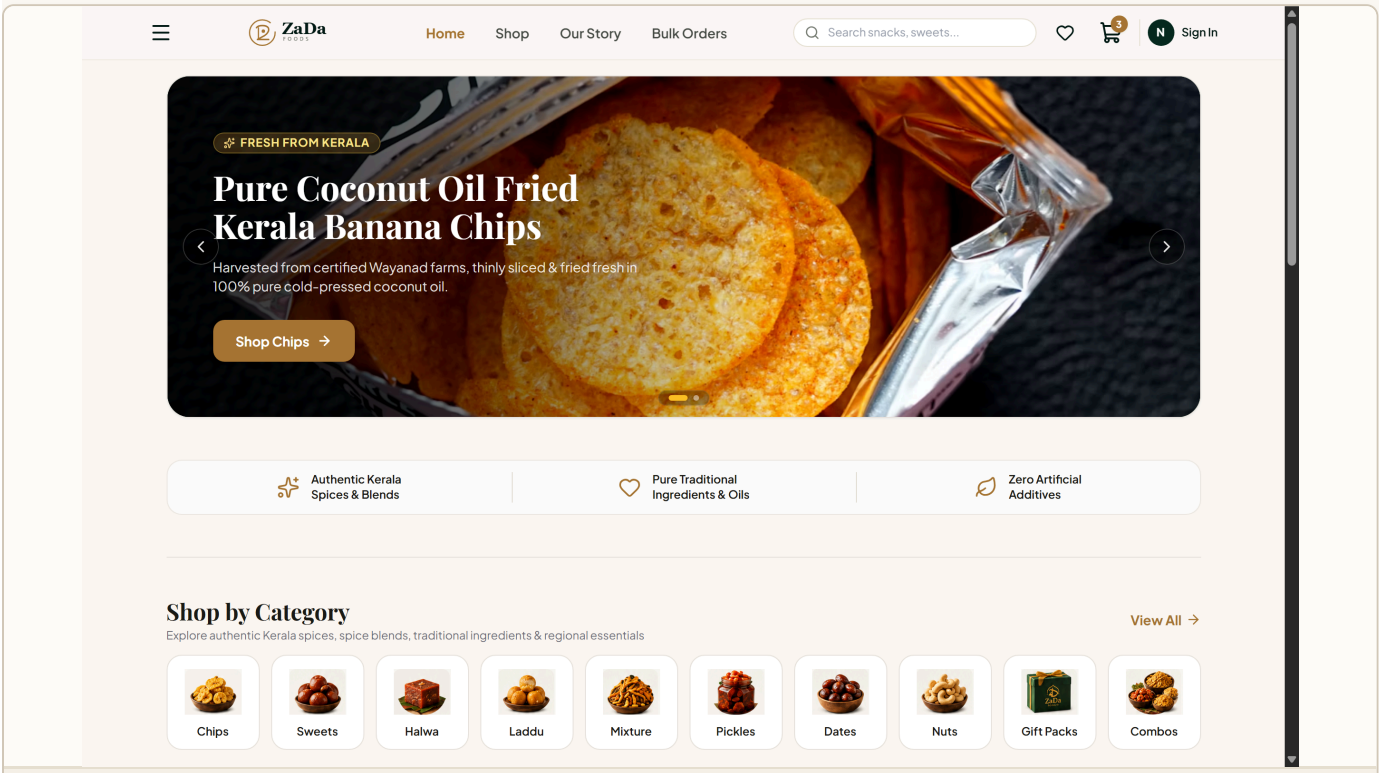

Figure 1.1: Storefront Homepage showing premium hero banner, USP strip (Spices & Blends, Pure Ingredients, Zero Additives), and authentic Kerala visual theme.

Brand Identity Core Rules:

- **Official Tagline:** "*Authentic Kerala Flavours, Rooted in Tradition*"
- **Colour Palette:** Warm Ivory (#FAF7F2), Forest Green (#072C20), and Restrained Gold (#A67732).
- **Catalogue Focus:** Kerala spices, ground blends, pure cold-pressed oils, traditional cooking essentials, and farm-fresh specialty snacks.

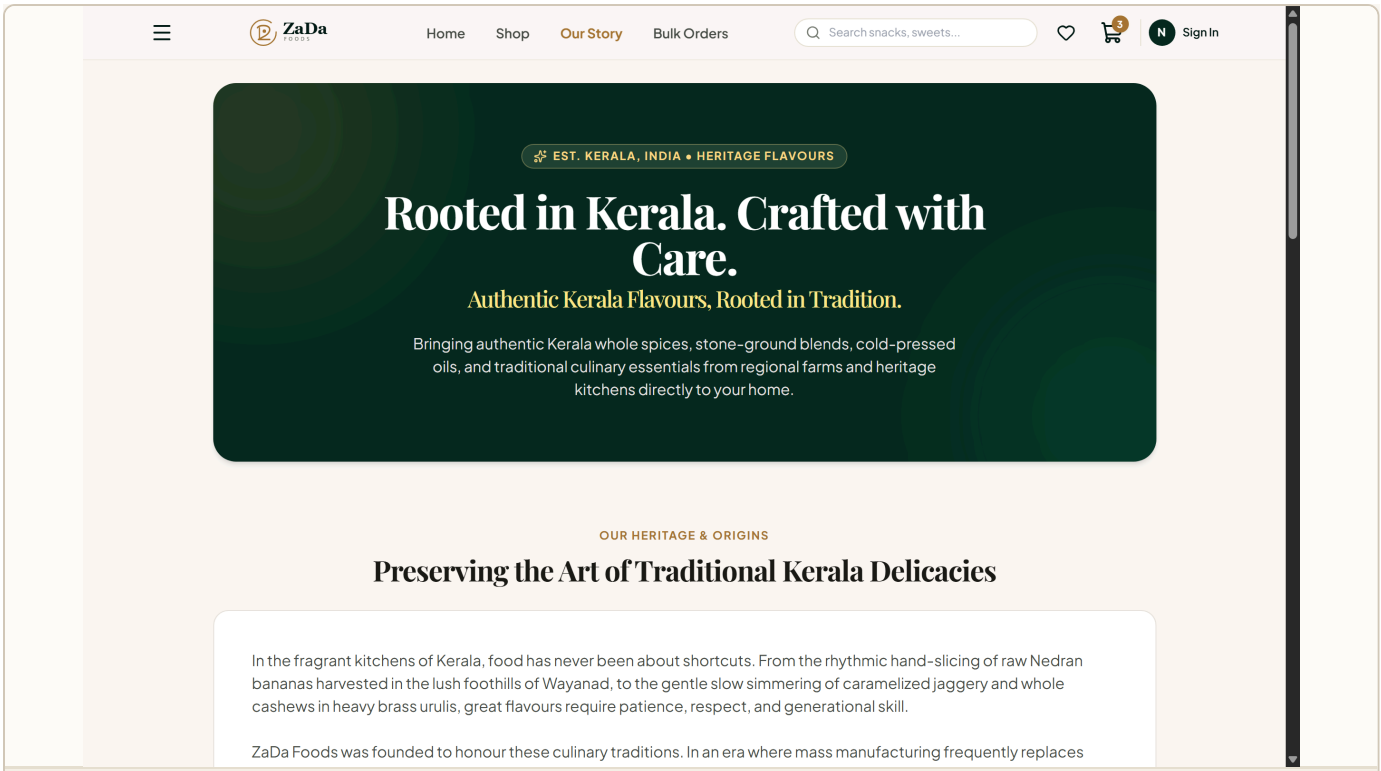

Figure 1.2: Our Story page showcasing the four pillars of ZaDa craftsmanship: Hand-Harvested Hill Spices, Farm-Direct Bananas, Pure Cold-Pressed Coconut Oil, and Batch-Crafted Freshness.

02. Product Discovery, Category Navigation & Filters

The shop page allows customers to quickly find spices, blends, and snacks through intuitive category buttons, instant search, and sorting filters.

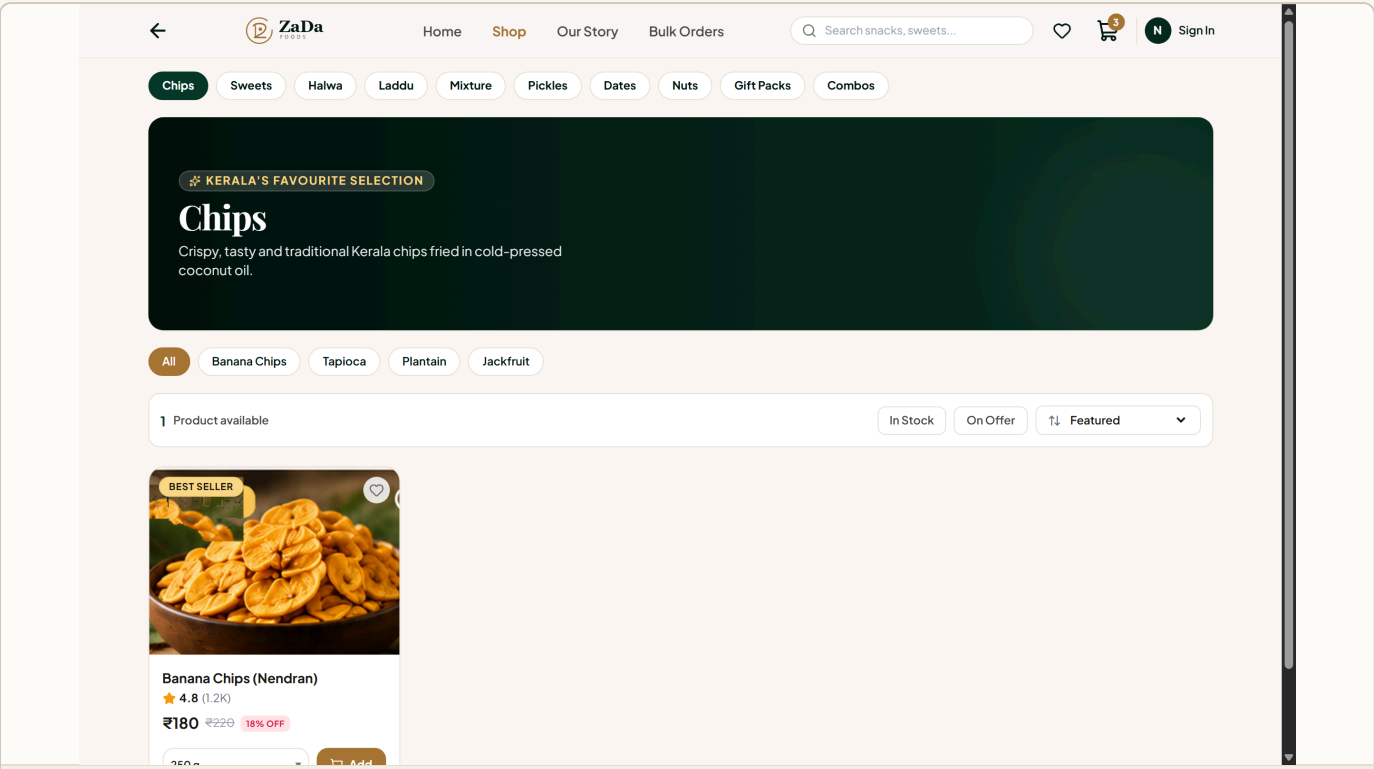

Figure 2.1: Shop catalogue view displaying category pills (Spices & Blends, Snacks, Traditional Essentials), pricing, variant chips, and instant "Add to Bag" triggers.

1 **Category Filtering**

Customers tap any top category pill to instantly narrow down products without reloading the entire page.

2 **Instant Keyword Search**

Typing in the top navigation bar filters matches across product titles, spice ingredients, and descriptions in real time.

3 **Variant Selection on Catalogue Card**

Customers can choose pack sizes (e.g. 250g, 500g, 1kg) directly from the catalogue card before adding to cart.

03. Product Detail Page: Variants, Freshness & Pricing

The Product Detail Page (PDP) provides customers with detailed nutritional facts, ingredient transparency, customer star ratings, and real-time inventory availability.

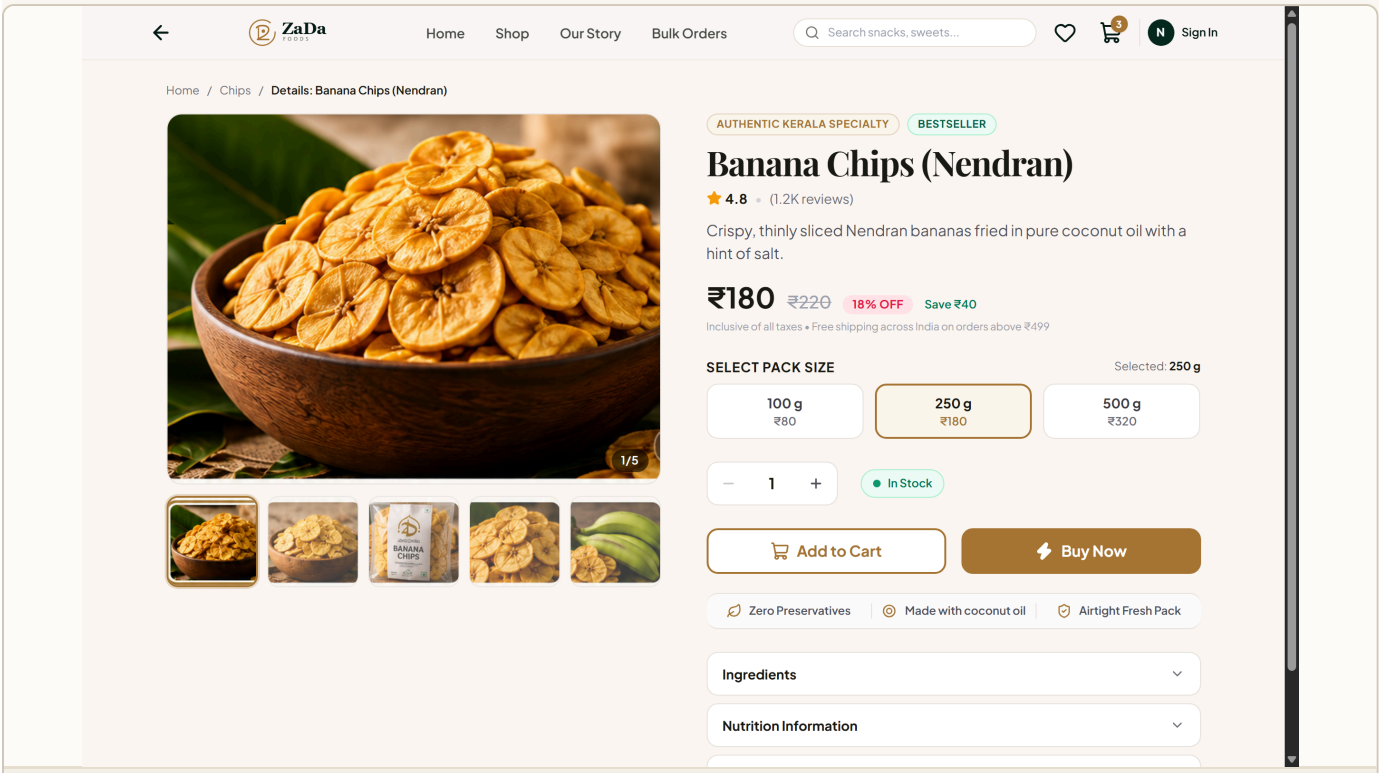

Figure 3.1: Product detail page featuring multi-angle high-res gallery, weight variant selection, freshness promise badge, and quantity controls.

Key Elements on Every Product Page:

- **Dynamic Pricing & Savings:** Displays Current Price, Crossed-Out MRP, and calculated percentage discount badge.
- **Stock Indicators:** Real-time alerts such as "In Stock — Fresh Batch Ready" or "Only 3 left in stock". When inventory hits zero, the button automatically transforms into a disabled "Out of Stock" state.
- **Verified Customer Reviews:** Verified purchase badges, user-submitted star ratings, and authentic feedback.

04. Shopping Cart, Bag Management & Bulk Inquiries

The shopping cart calculates subtotals, packaging, courier delivery charges, and coupon discounts with complete price transparency.

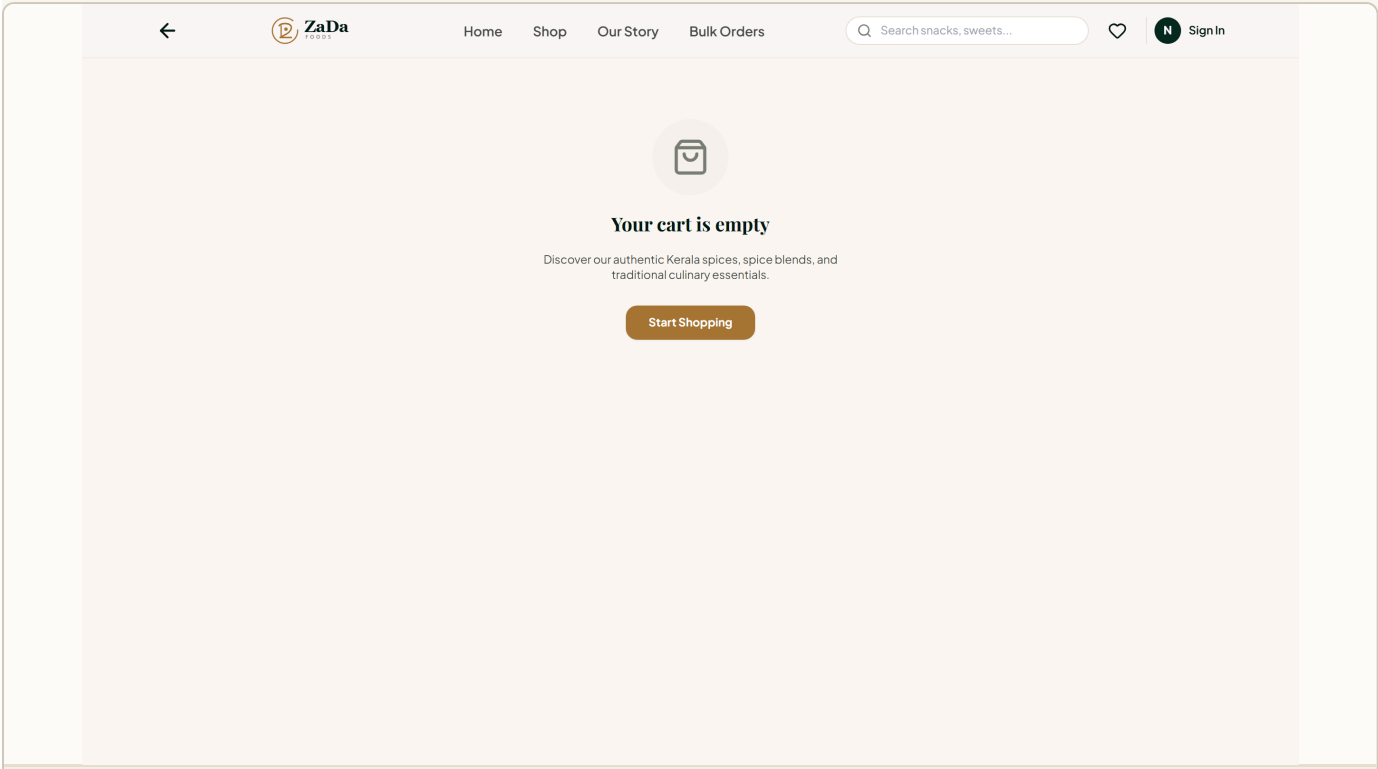

Figure 4.1: Shopping Cart summary displaying selected items, unit quantities, subtotal calculations, and free delivery progress indicator.

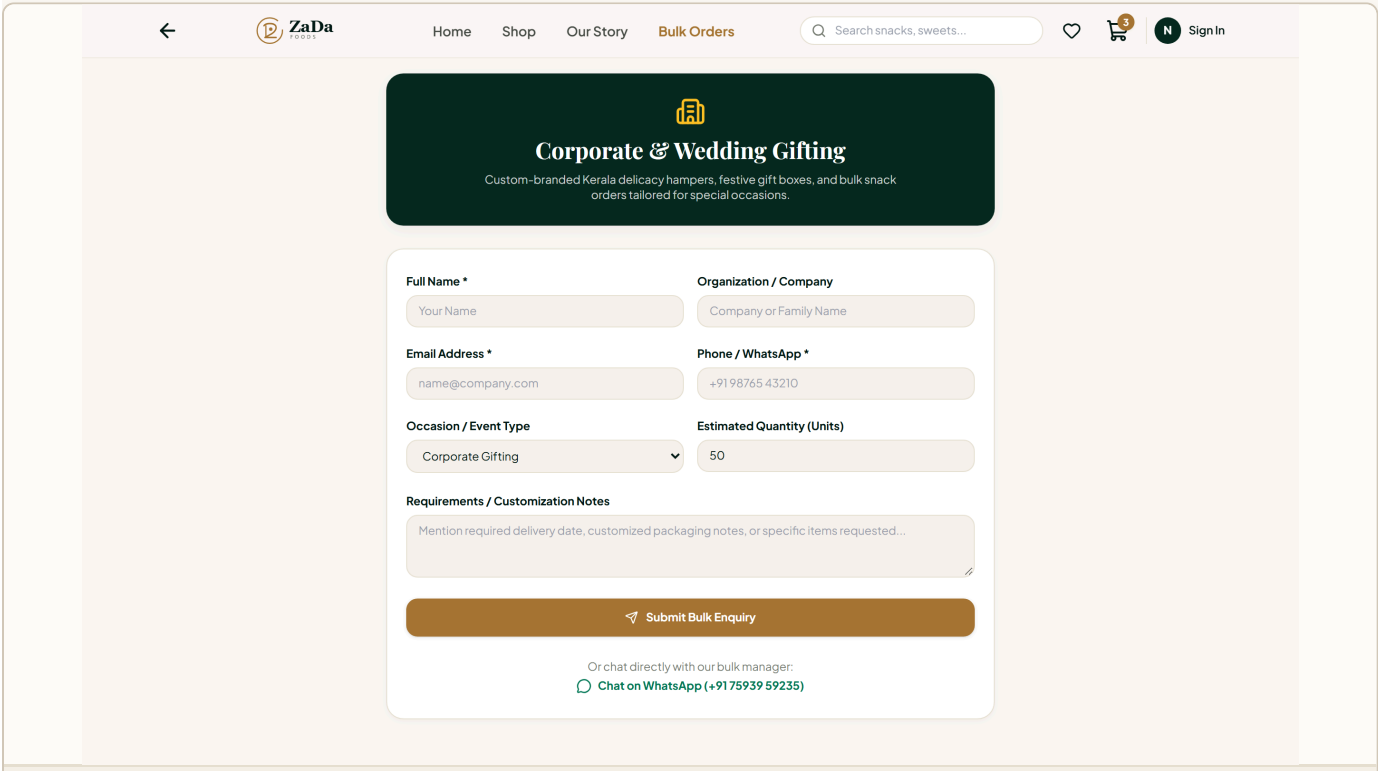

Figure 4.2: Bulk Order Inquiry form for wholesale buyers, festival gifting, export orders, and restaurant culinary supply.

Bulk Inquiries Workflow:

When wedding planners, corporate clients, or restaurants require bulk spices or snacks (>15kg), they submit the Bulk Enquiry form. The request is routed directly to the Admin Console under *Bulk Enquiries* for custom wholesale quote dispatch.

05. Frictionless Guest Checkout (No Registration Needed)

To eliminate checkout friction, ZaDa Foods offers a **first-class Guest Checkout**. Customers are never forced to register an account or create a password to complete their purchase.

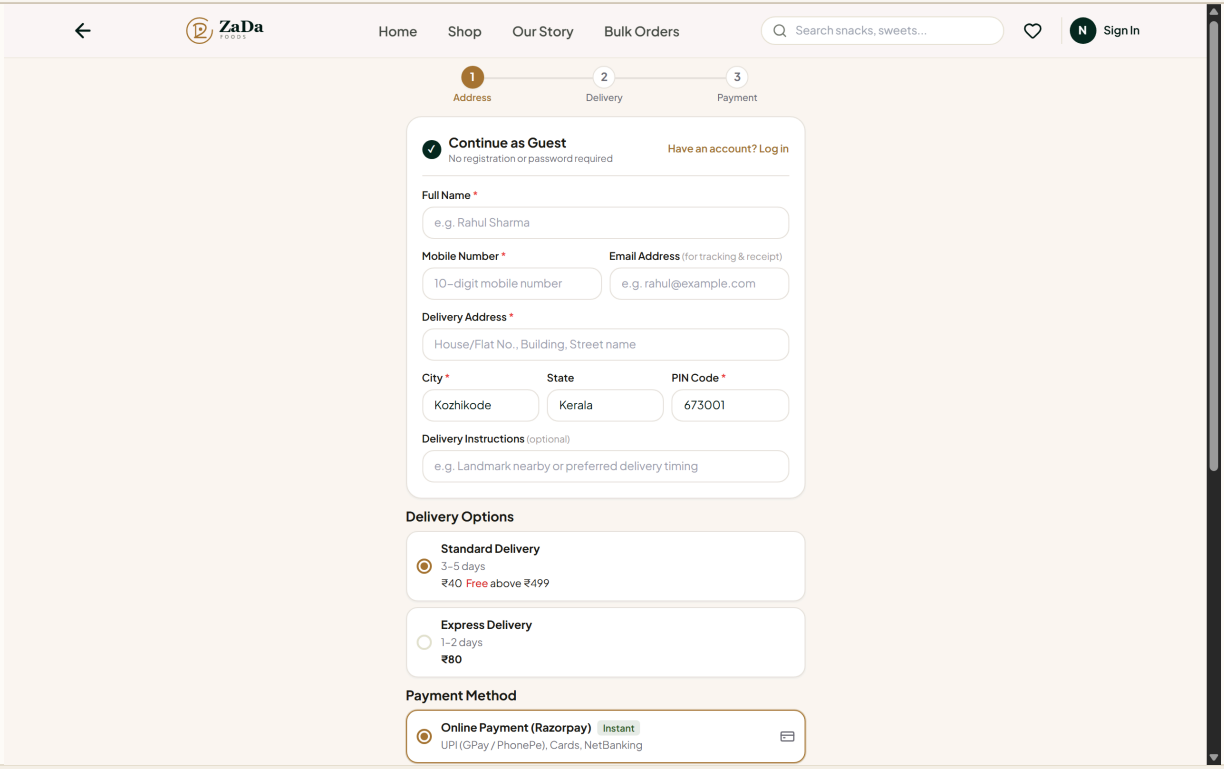

Figure 5.1: Guest Checkout screen showing the "Continue as Guest" panel with full delivery address and 10-digit mobile verification.

1 **Zero Friction Data Entry**

Guests provide only essential shipping information: Full Name, 10-Digit Mobile Number, Email (for invoice), and Shipping Address with PIN code.

2 **Cryptographic Session Protection**

Upon placing the order, a cryptographically secure 64-character guest token is issued and stored in browser storage. Guests can track their specific order without seeing other customers' data.

3 **Optional Account Creation**

Guests can choose to create a permanent account later from the order confirmation screen with one click.

06. Registered Customer Checkout & Account Portal

Returning customers can sign in to access their saved delivery addresses, order history, and re-order previous spice favorites with one click.

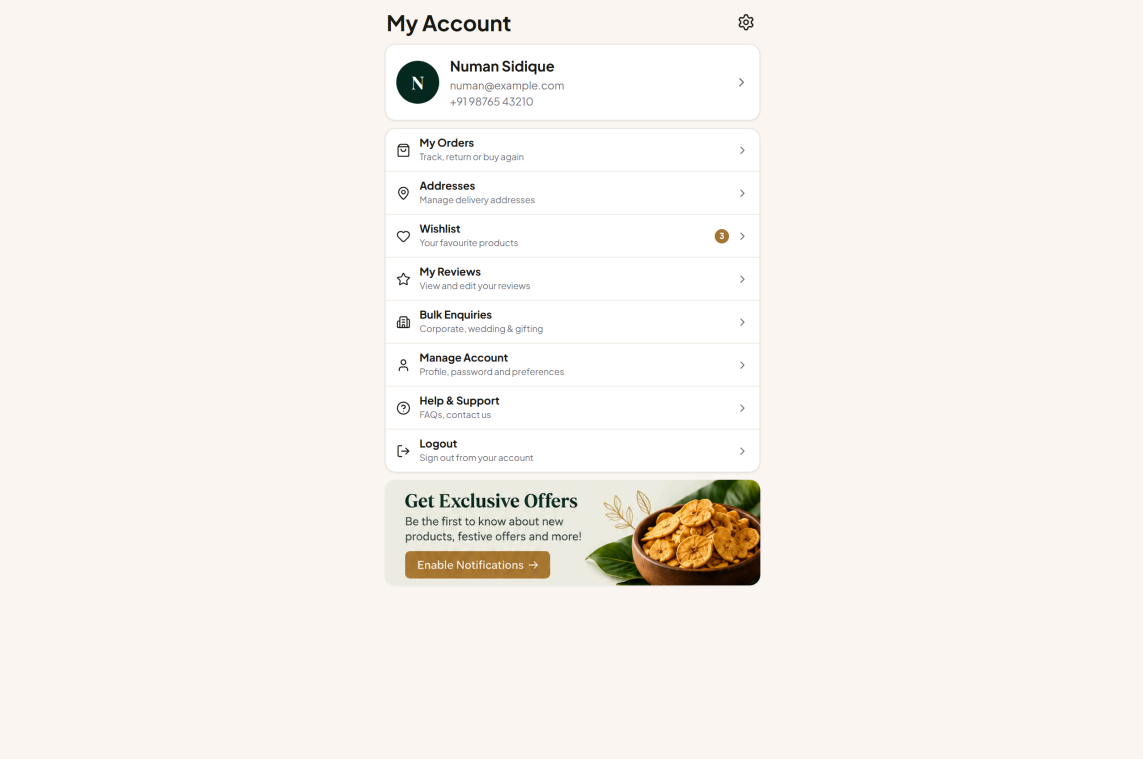

Figure 6.1: Customer Account Dashboard showing order status history, saved addresses (Home, Office), and account profile details.

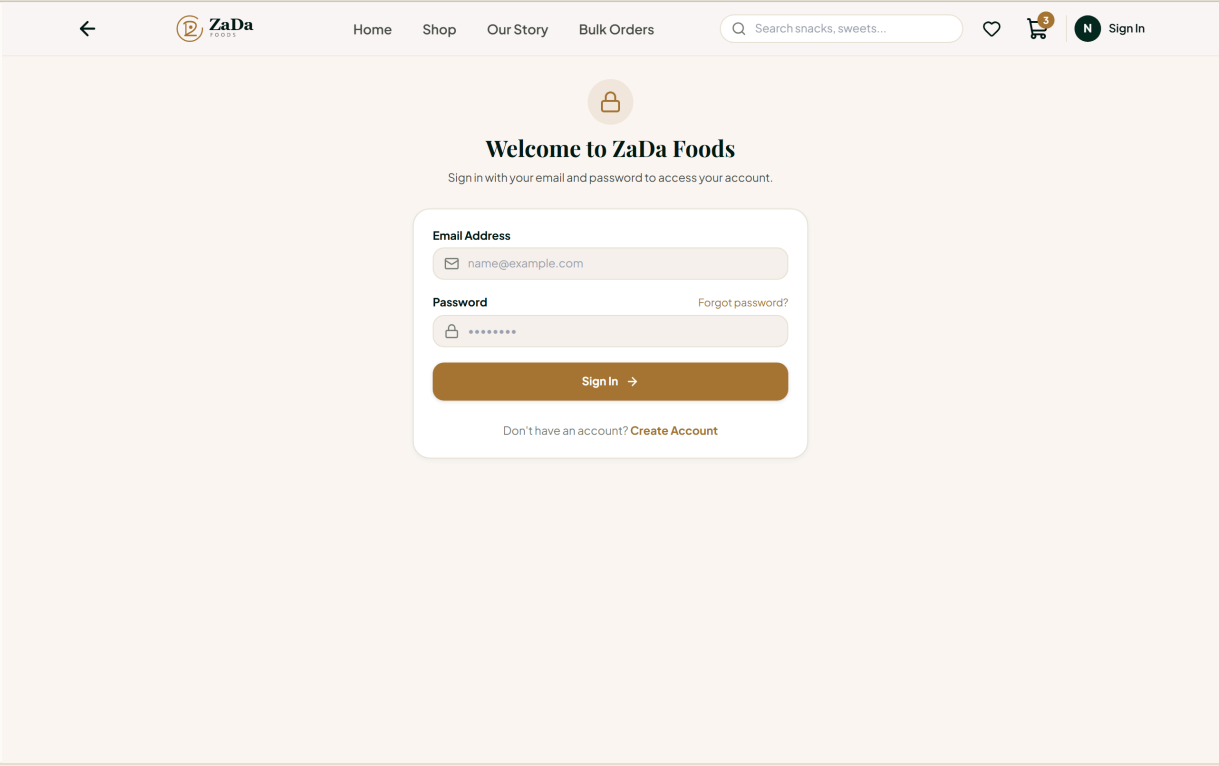

Figure 6.2: Sign In screen supporting email and password authentication with self-service password reset.

07. Payment Options, Order Confirmation & Live Tracking

ZaDa Foods provides three payment channels tailored to Indian e-commerce buyers:

Payment Method	Processing Mechanism	Customer Experience & Settlement
Online Payment (Razorpay)	Instant gateway via UPI, Google Pay, PhonePe, Cards, Net Banking	100% prepaid order. Order is immediately marked as `PAID` and scheduled for packing.
COD Advance + Doorstep Balance	Fixed or percentage advance (e.g. ₹60 or 15%) paid online; remainder at delivery	Mitigates return-to-origin (RTO) risks. Marked as `ADVANCE_PAID` with remaining balance indicated on invoice.
WhatsApp Assisted Order	Pre-filled order summary dispatched to ZaDa WhatsApp (+91 75939 59235)	Ideal for customers preferring manual bank transfer, custom requests, or regional Malayalam communication.

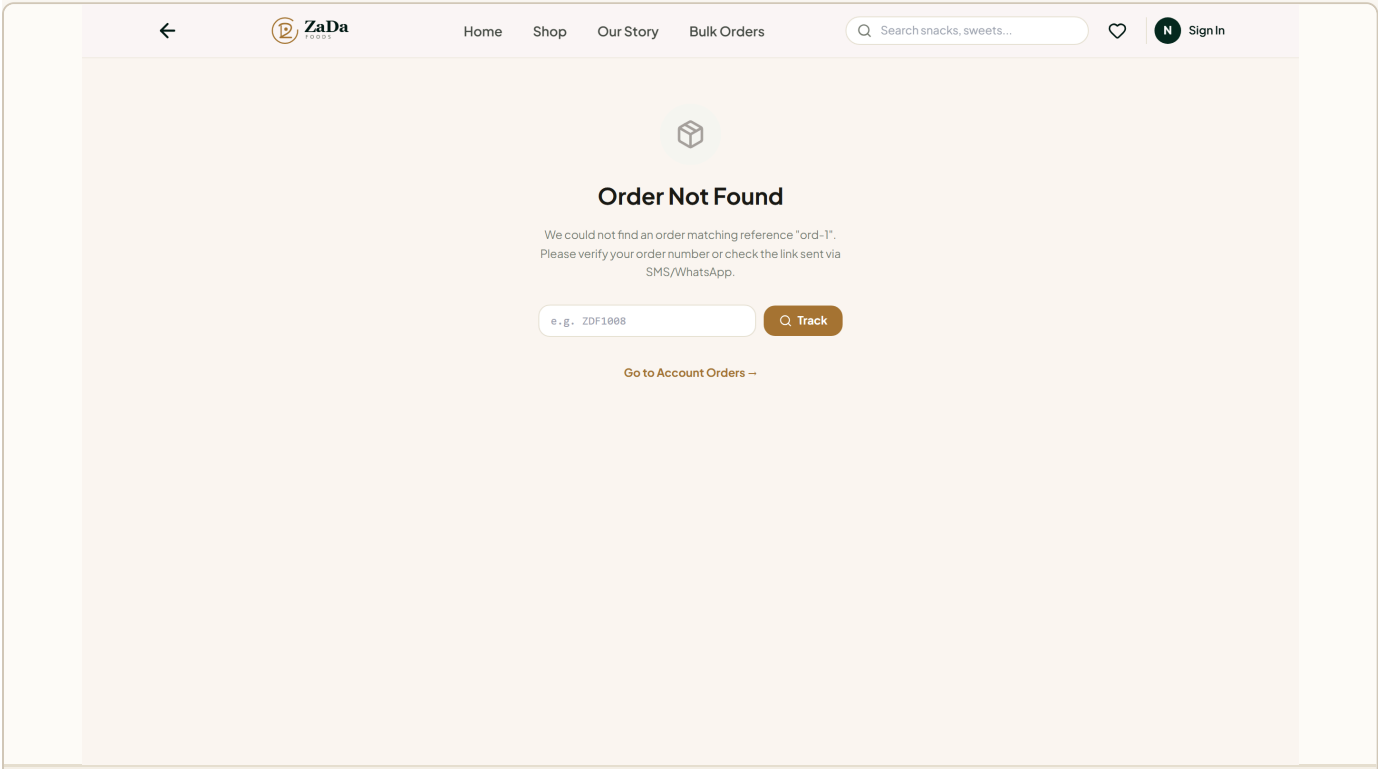

Figure 7.1: Live Order Tracking screen displaying five-stage progress bar (Placed, Confirmed, Packed, Shipped, Delivered) with courier tracking link.

> **IDOR Security Protection on Order Tracking:**
>
> Orders are protected against unauthorized viewing. A stranger guessing order numbers (e.g. `ord-1002`) is greeted by a **"Protected Order"** screen requiring either an account login or the unique cryptographic guest access token issued at checkout.

08. Mobile Experience & Direct WhatsApp Ordering

Over 75% of Indian e-commerce traffic originates from mobile devices. The ZaDa storefront features an app-like bottom navigation bar and integrated WhatsApp support.

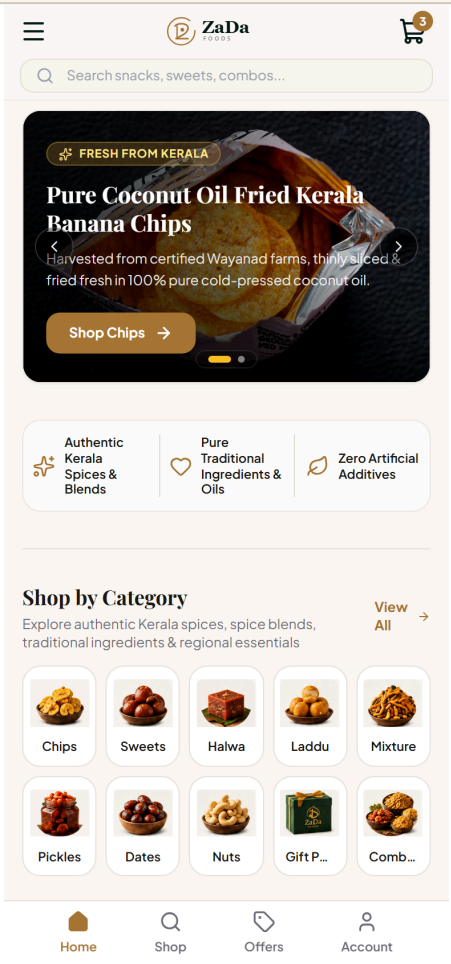

Figure 8.1: Mobile viewport showing sticky bottom navigation (Home, Shop, Offers, Cart, Account) and quick-action WhatsApp button.

> **Official WhatsApp Routing:**
>
> Every WhatsApp link, assistance button, and order dispatch message is normalized to the official ZaDa WhatsApp number: **+91 75939 59235** (clean link: `https://wa.me/917593959235`). The message pre-fills customer name, item list, and delivery city for instant concierge response.

SECTION B: ADMIN PANEL OPERATIONS GUIDE

This section is the definitive reference for ZaDa Foods administrators, store managers, and fulfillment personnel operating the back-office console.

09. Admin Authentication & Role-Based Access Control (RBAC)

The ZaDa Operations Console enforces strict Role-Based Access Control. Administrative access requires explicit cryptographic authorization.

Role	System Permissions	Intended Operator
SUPER ADMINISTRATOR	Unrestricted access across all modules, including Staff User creation, Role elevation, Store Settings, Payment Keys, and Database Audit Logs.	Business Owners & Principal Directors
OPERATIONS ADMIN	Orders management, AWB courier entry, Inventory updates, Product catalogue adjustments, and Bulk enquiry resolution.	Warehouse Managers & Dispatch Leads
CONTENT ADMIN	CMS hero banners, Category promos, Festival themes, and Customer review moderation.	Marketing Executives & Content Writers
SUSPENDED USER	Zero access. Any existing active sessions are terminated immediately upon status toggle.	Off-boarded Staff or Inactive Contractors

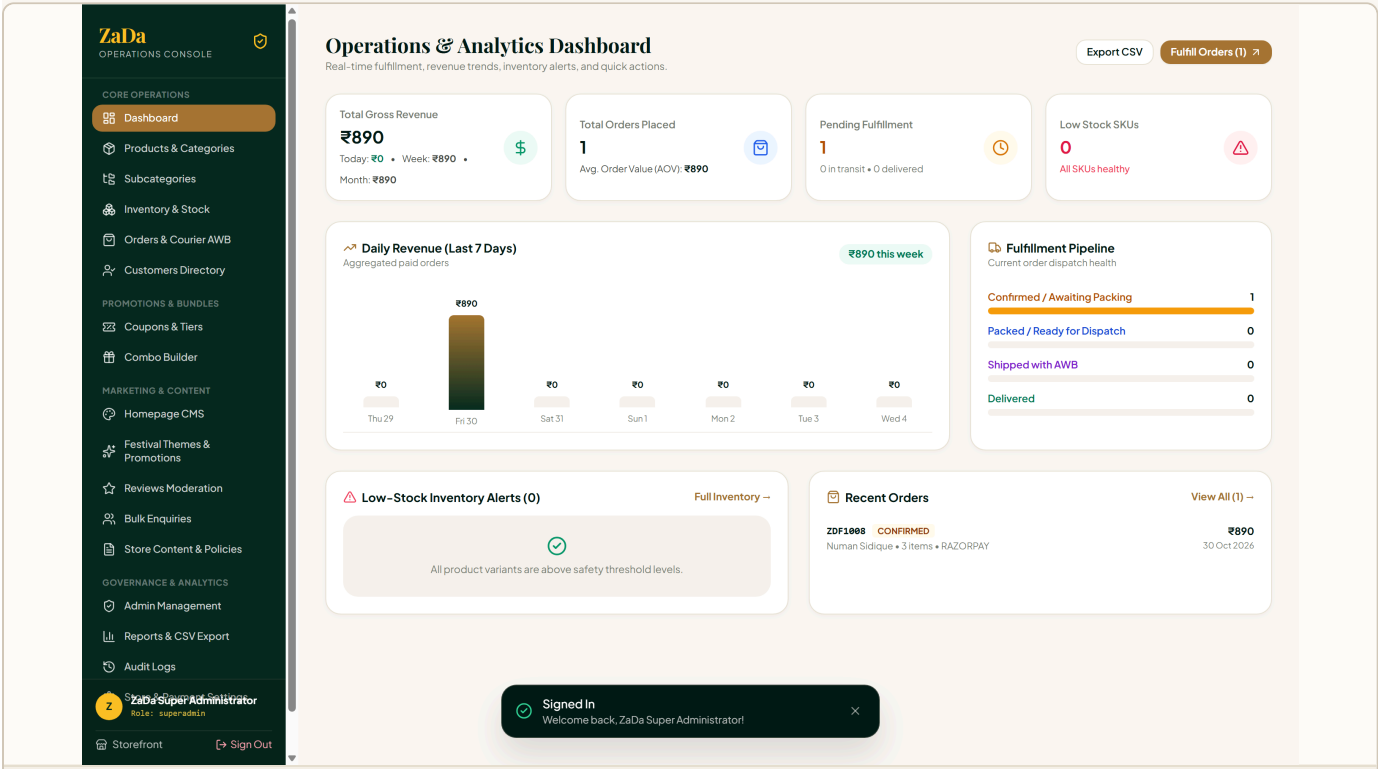

Figure 9.1: Operations Dashboard presenting real-time revenue, gross order metrics, pending fulfillment count, and low stock warnings.

10. Product Catalogue Management

Administrators have complete control over product listings, variants, pricing, packaging weights, and marketing badges.

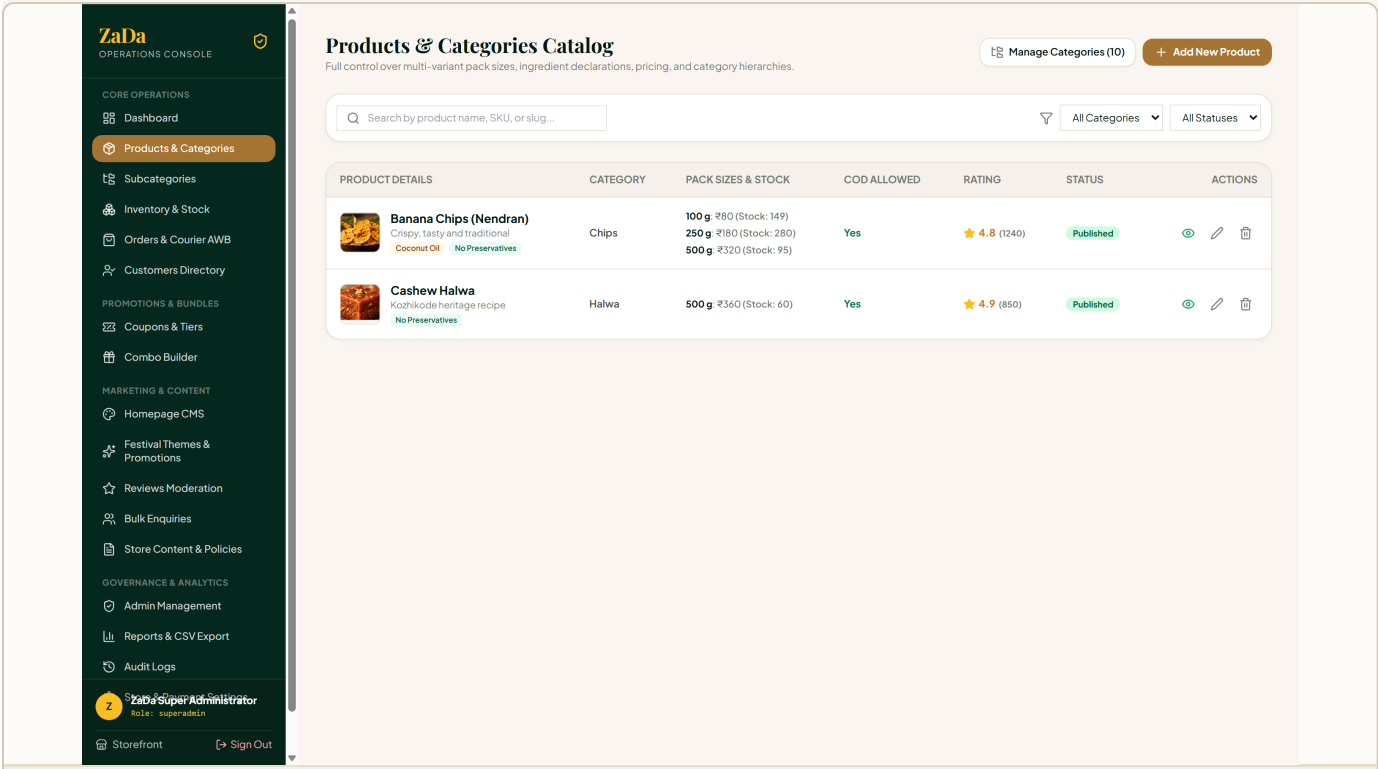

Figure 10.1: Product catalogue table showing SKU codes, category tags, base prices, variant count, stock status, and edit/delete actions.

1 **Adding a New Product**

Click "+ Add Product" at the top right. Enter Product Name, Category, Parent Subcategory, Description, and Shelf-Life details.

2 **Configuring Weight Variants**

Define individual pack sizes (e.g. 100g, 250g, 500g, 1kg) with specific Selling Price, MRP, and initial stock count.

3 **Assigning Promotional Badges**

Select badges such as "*Bestseller*", "*Pure Malabar Spices*", or "*Traditional*" to enhance customer visibility.

11. Category & Subcategory Hierarchy

The storefront organizes products into a clean two-level hierarchy: Parent Categories and Subcategories.

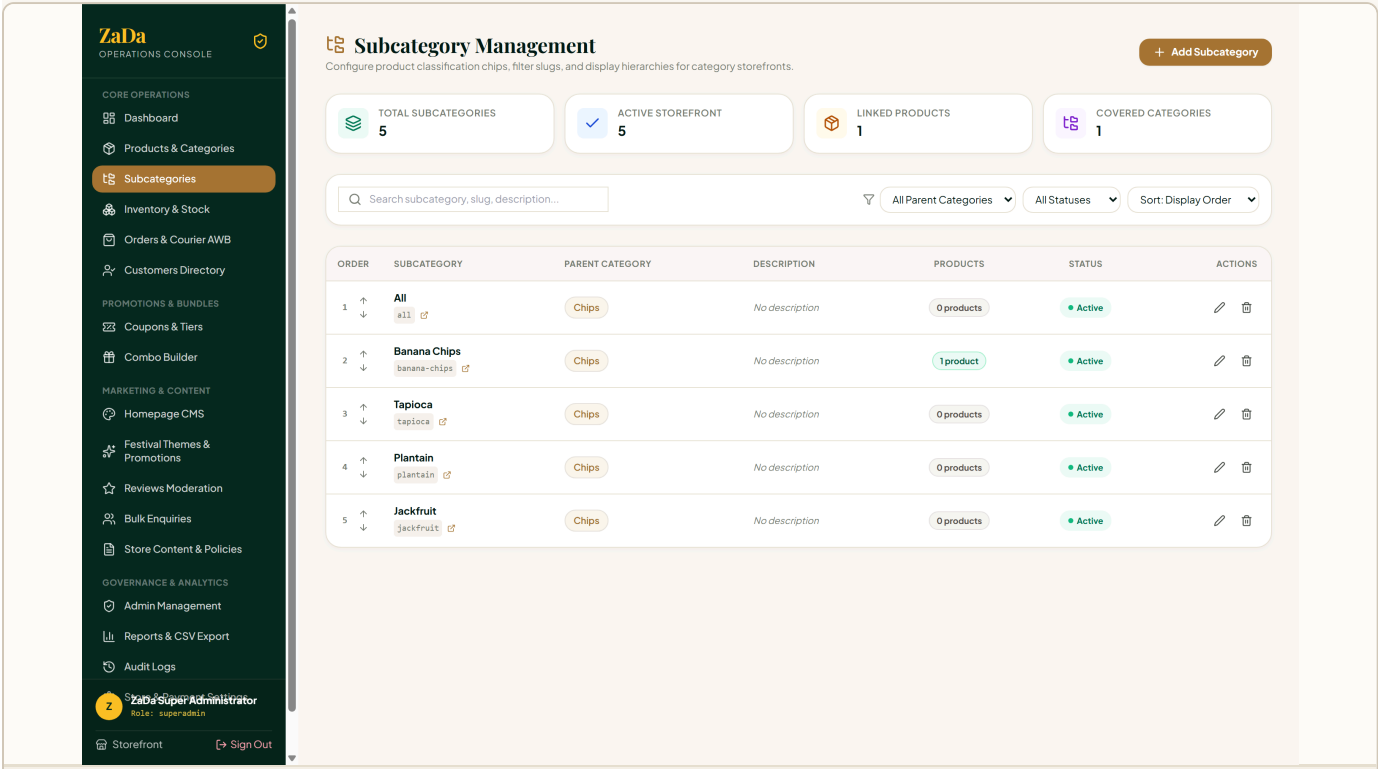

Figure 11.1: Category and Subcategory tree displaying parent assignments, display order, image thumbnails, and active visibility toggles.

Catalogue Hierarchy Structure:

- **Spices & Blends (Parent):** Whole Spices (Black Pepper, Cardamom, Cloves), Ground Spices (Kashmiri Chilli, Turmeric, Coriander), Traditional Masalas (Fish Curry Masala, Sambar Powder).
- **Traditional Essentials (Parent):** Pure Cold-Pressed Coconut Oil, Malabar Tamarind (Kudampuli), Uruli-roasted seasonings.
- **Specialty Kerala Snacks (Parent):** Traditional Nendran Banana Chips, Jackfruit Chips, Sharkara Upperi.

12. Real-Time Inventory & Stock Alerts

The inventory module protects the business from overselling and alerts operators before stocks run out.

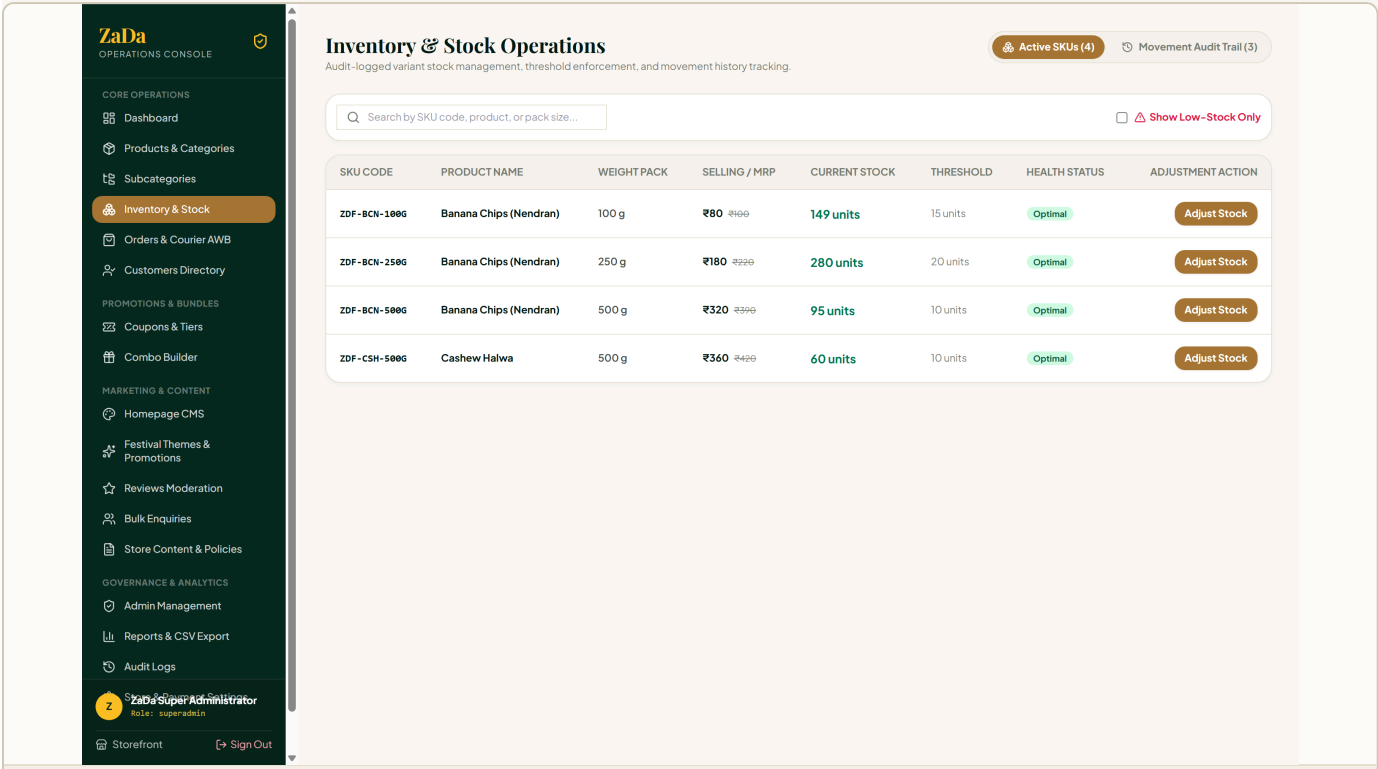

Figure 12.1: Inventory Management grid with SKU tracking, stock level badges, threshold monitors, and inline stock adjustment.

Inventory Thresholds:

- **HEALTHY STOCK:** Quantity > 10 units. Displays standard "In Stock" on customer site.
- **LOW STOCK WARNING:** Quantity between 1 and 10 units. Triggered with warning text "Only X Left!".
- **OUT OF STOCK:** Quantity = 0. Frontend disables purchase and prevents checkout errors.

13. Order Processing, Courier AWB & Status Updates

The order management console handles order verification, payment status tracking, and dispatch communications.

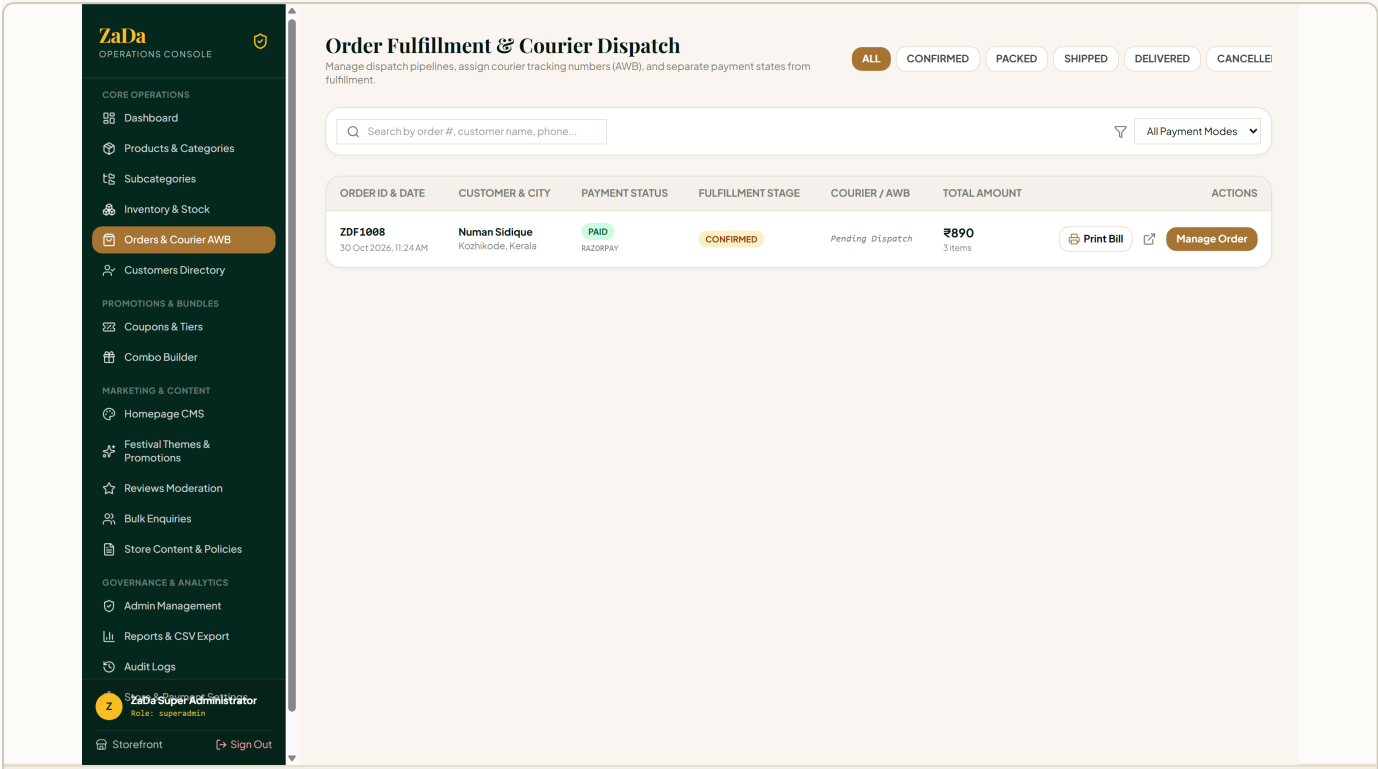

Figure 13.1: Order Management screen showing filter tabs (All, Pending, Confirmed, Shipped, Delivered), customer contact, and courier update drawer.

1 **Verify Payment Status**

Confirm that online orders show `PAID` or COD orders show `ADVANCE_PAID` before packing.

2 **Enter Courier Name & AWB Tracking Number**

Select the courier partner (Delhivery, DTDC, India Post, Blue Dart) and paste the tracking AWB code into the order details panel.

3 **Advance Order Status to "SHIPPED"**

Updating the status automatically updates the customer's live tracking timeline and prepares dispatch notifications.

14. Customers Directory & History

Administrators can look up customer profiles, total lifetime spending, past order references, and registered shipping addresses.

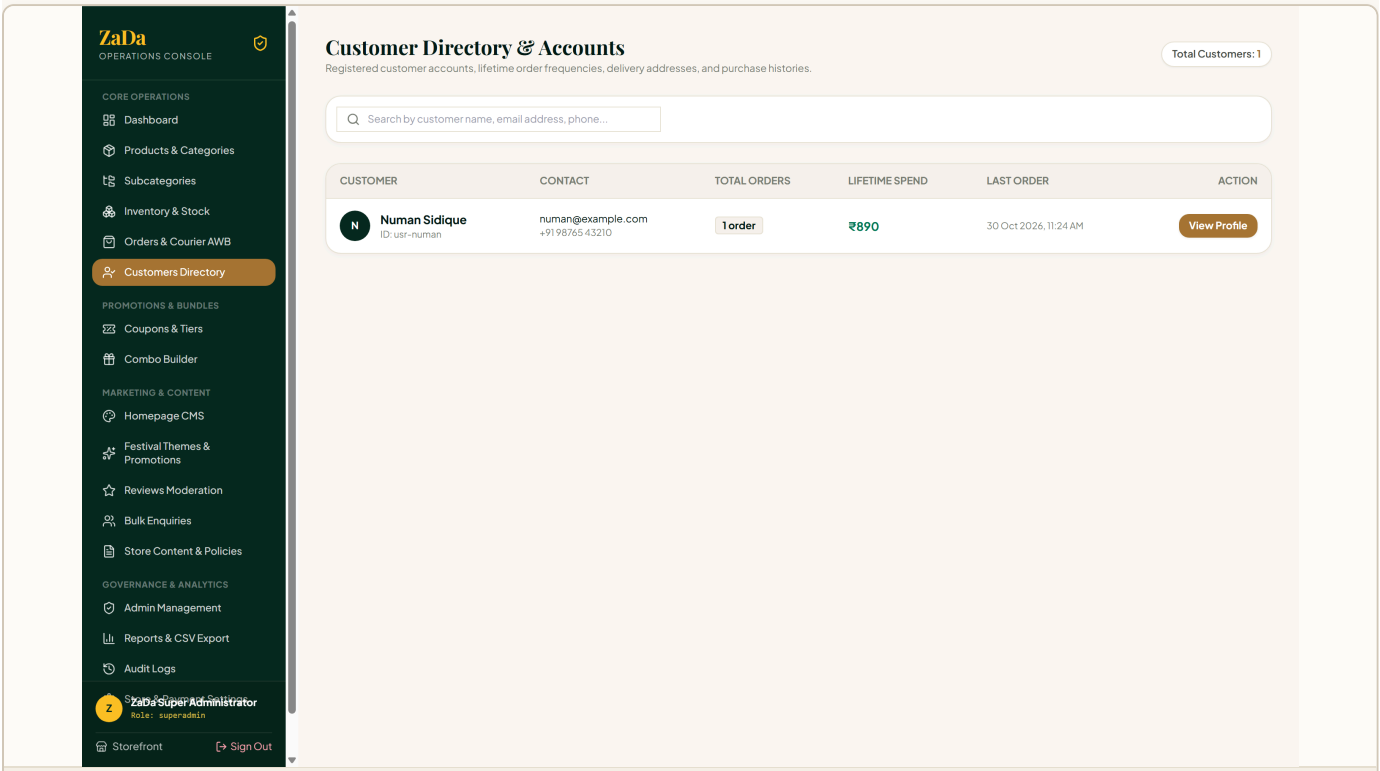

Figure 14.1: Customer Directory displaying registered names, verified mobile numbers, total completed orders, and lifetime value (LTV).

15. Coupons, Automatic Discounts & Tiers

Create and monitor promotional coupon codes with flexible discount parameters.

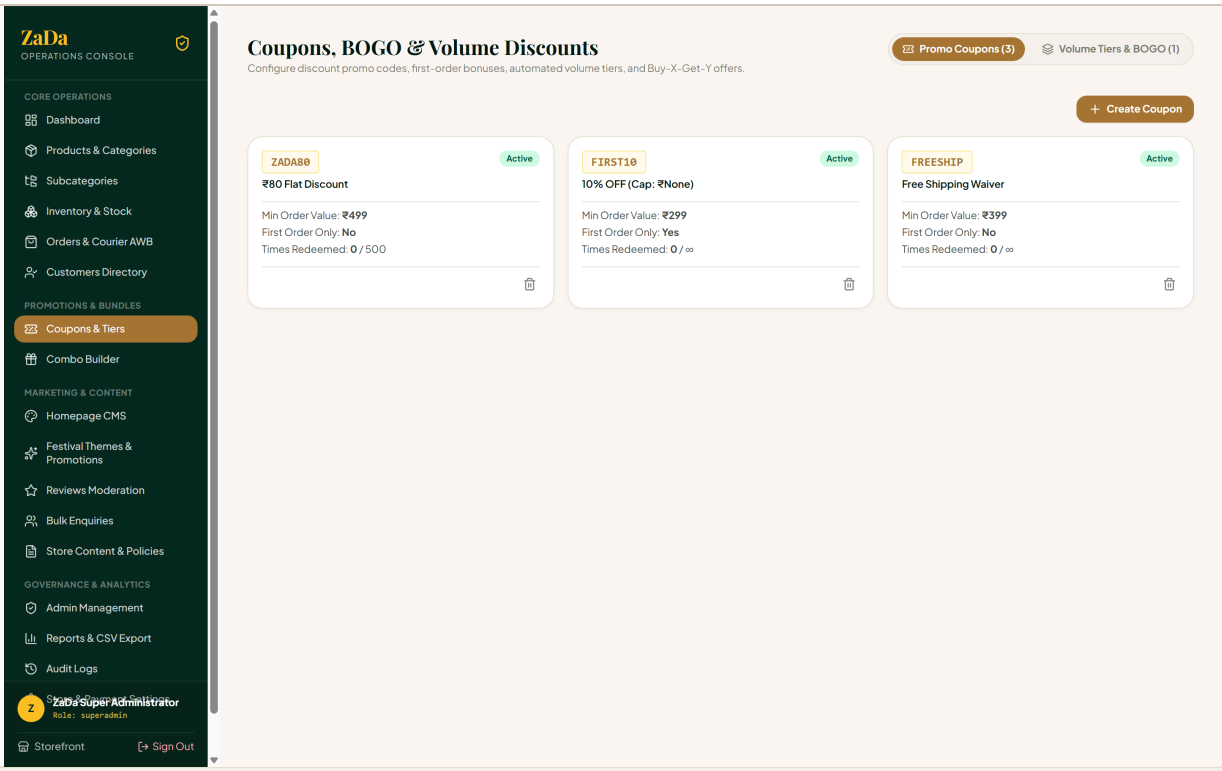

Figure 15.1: Coupon Management table with code definitions, percentage/flat discounts, minimum cart value requirements, and validity dates.

16. Combo Packs & Bundled Offers

Curate attractive gift boxes and multi-item spice bundles to increase Average Order Value (AOV).

Figure 16.1: Combo Builder module for assembling multi-item bundles (e.g. "Kerala Culinary Spice Box") with special bundle discounts.

17. Content Management System (CMS) & Dynamic Banners

Update homepage hero slides, promotional strip text, and category showcase banners without touching any code.

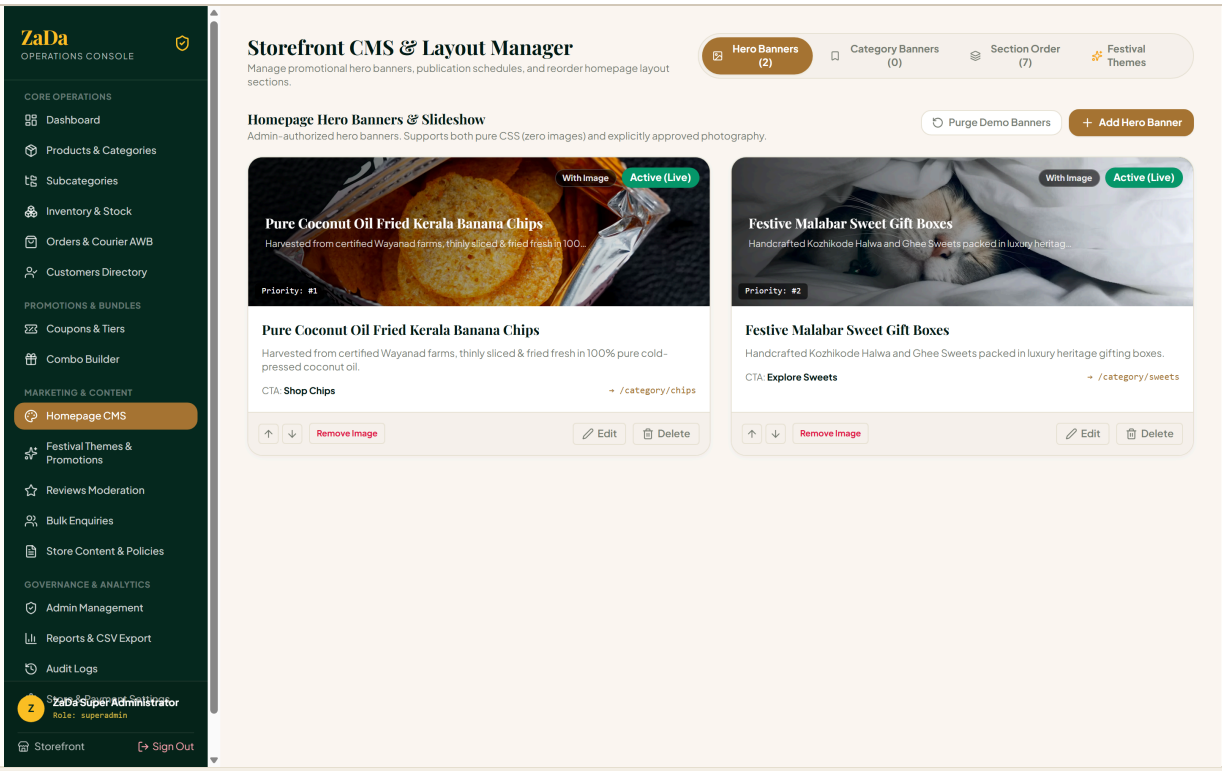

Figure 17.1: CMS Editor for managing hero slides, button links, promotional subtext, and banner images with instant storefront updates.

18. Festival Themes & Seasonal Styling

Activate festive themes (Onam, Vishu, Diwali, Christmas) with one click to transform the storefront's atmosphere.

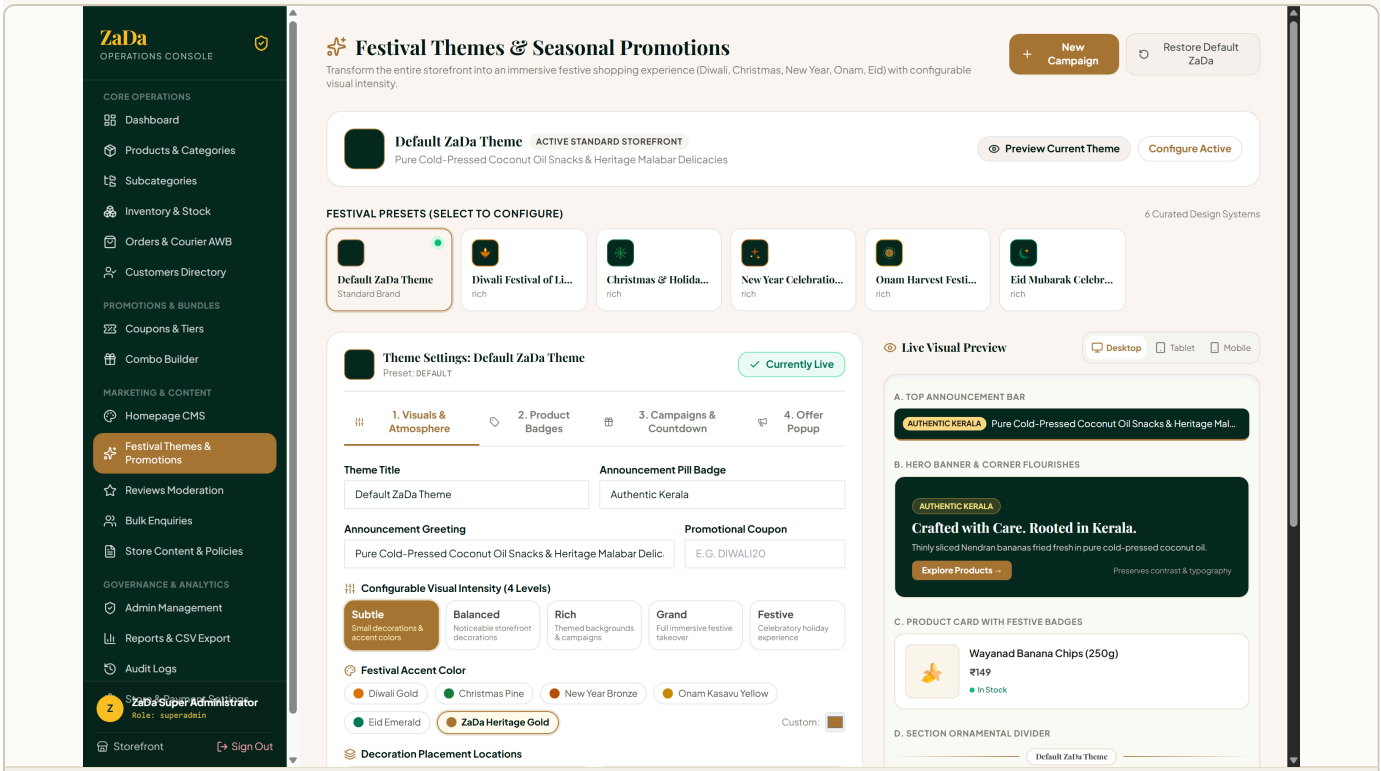

Figure 18.1: Festival Themes dashboard for activating seasonal color accents, promotional greetings, countdown timers, and festive ribbons.

19. Customer Review Moderation

Protect brand integrity by moderating incoming customer product reviews before they appear publicly on the storefront.

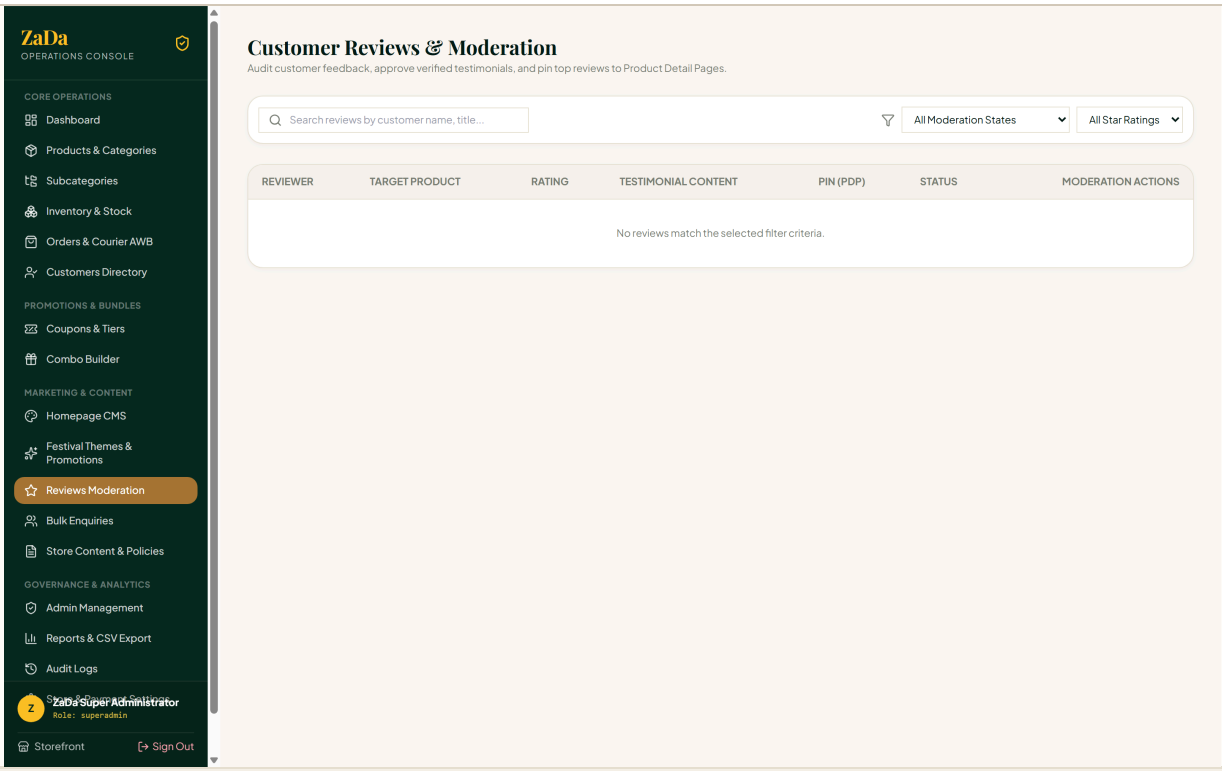

Figure 19.1: Review Moderation Queue showing submitted reviews, star ratings, reviewer status, and one-click Approve/Reject buttons.

20. Customer Inquiries & Bulk Orders

Centralized inbox for general customer contact inquiries and corporate wholesale leads.

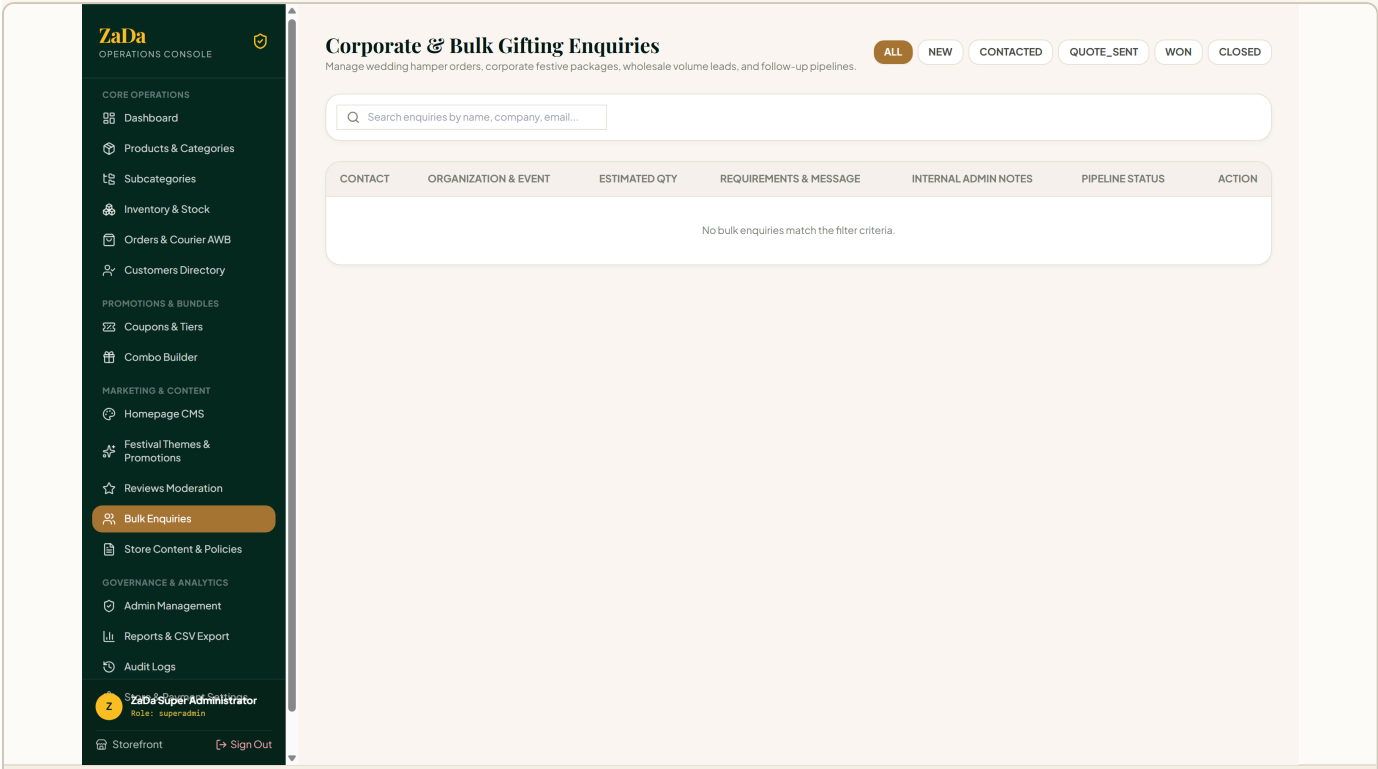

Figure 20.1: Inquiries inbox displaying customer name, contact details, subject, inquiry message, and status tracking (Pending, Contacted, Resolved).

21. Sales Analytics & Accounting Data Export

Generate financial and operational summaries with one-click CSV export for accounting and tax compliance.

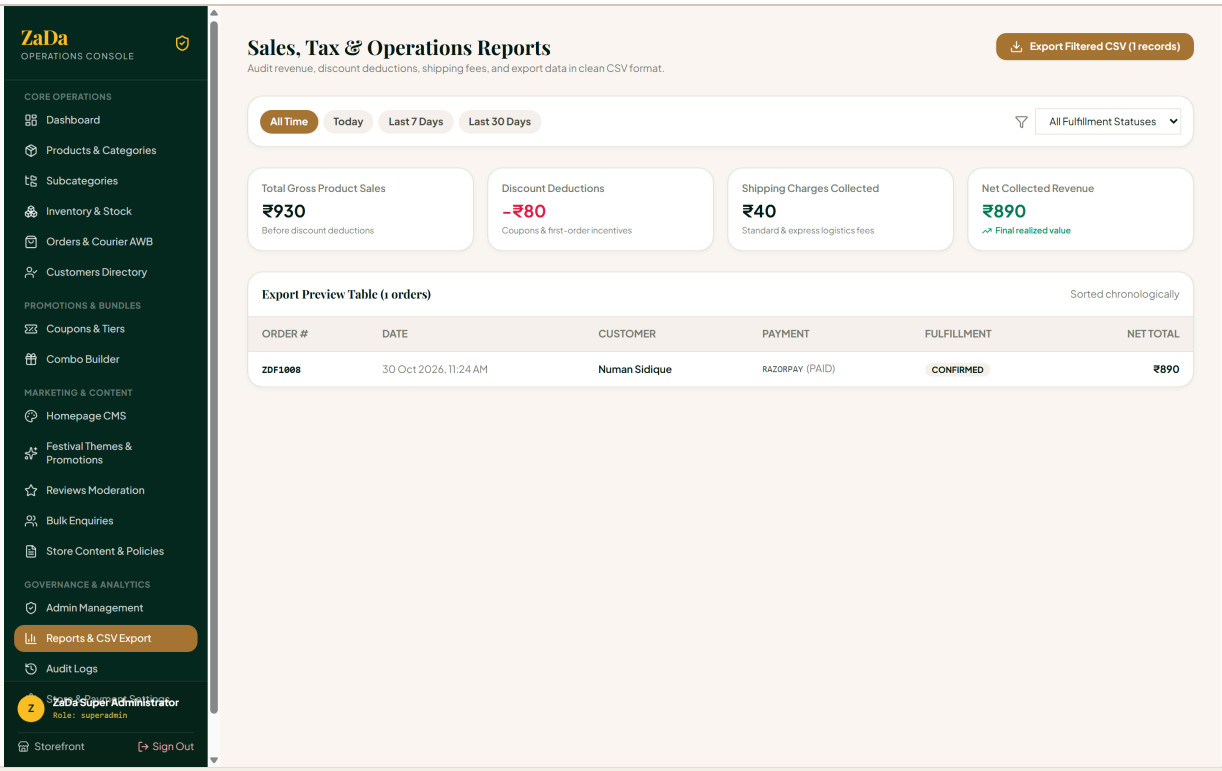

Figure 21.1: Reports module showing monthly revenue charts, top-selling spices, COD advance totals, and CSV export buttons.

22. Staff Admin Users & Role Elevation

Super Administrators can provision new staff accounts, assign granular role permissions, or revoke administrative access.

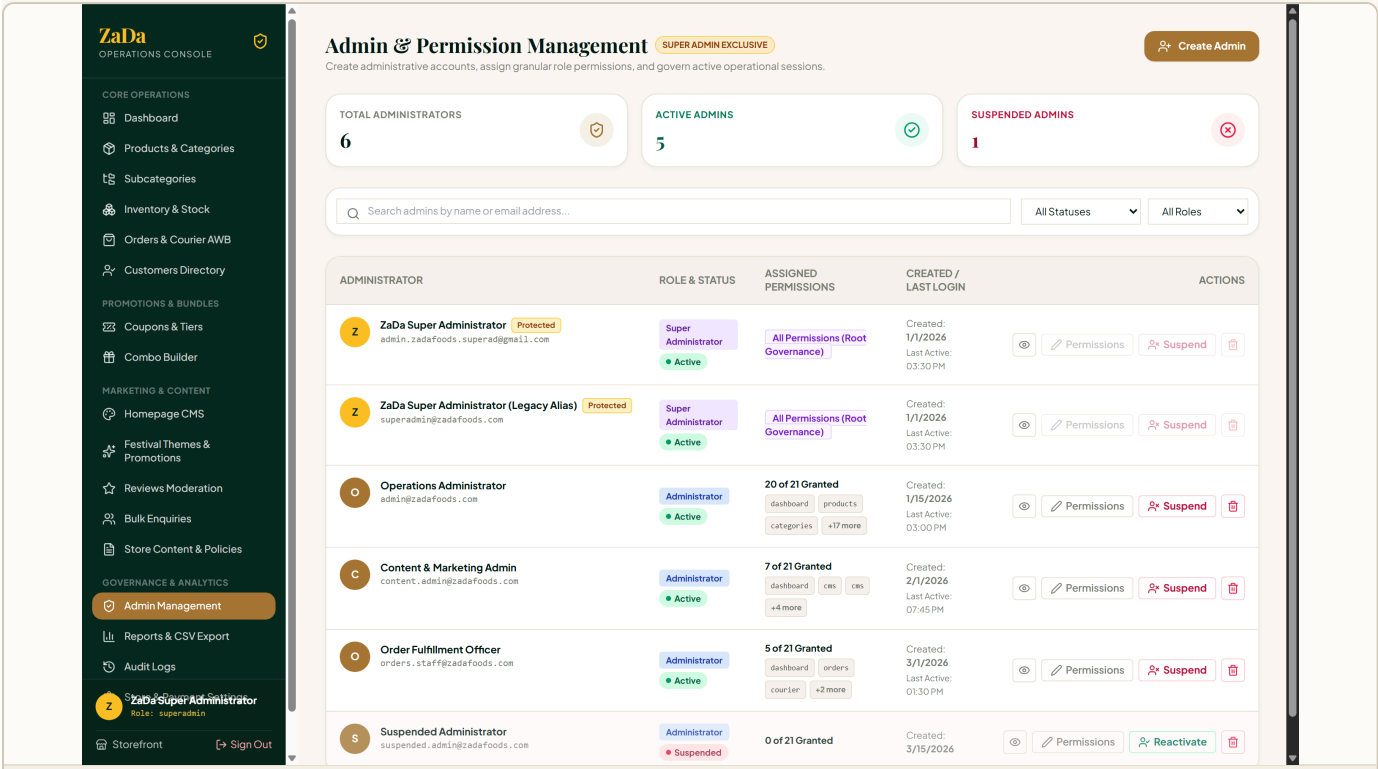

Figure 22.1: Staff Administration console displaying operator list, assigned permissions, role elevation triggers, and account suspension toggles.

23. Store & Payment Settings Configuration

Configure business hours, courier rules, COD advance thresholds, and payment gateway keys.

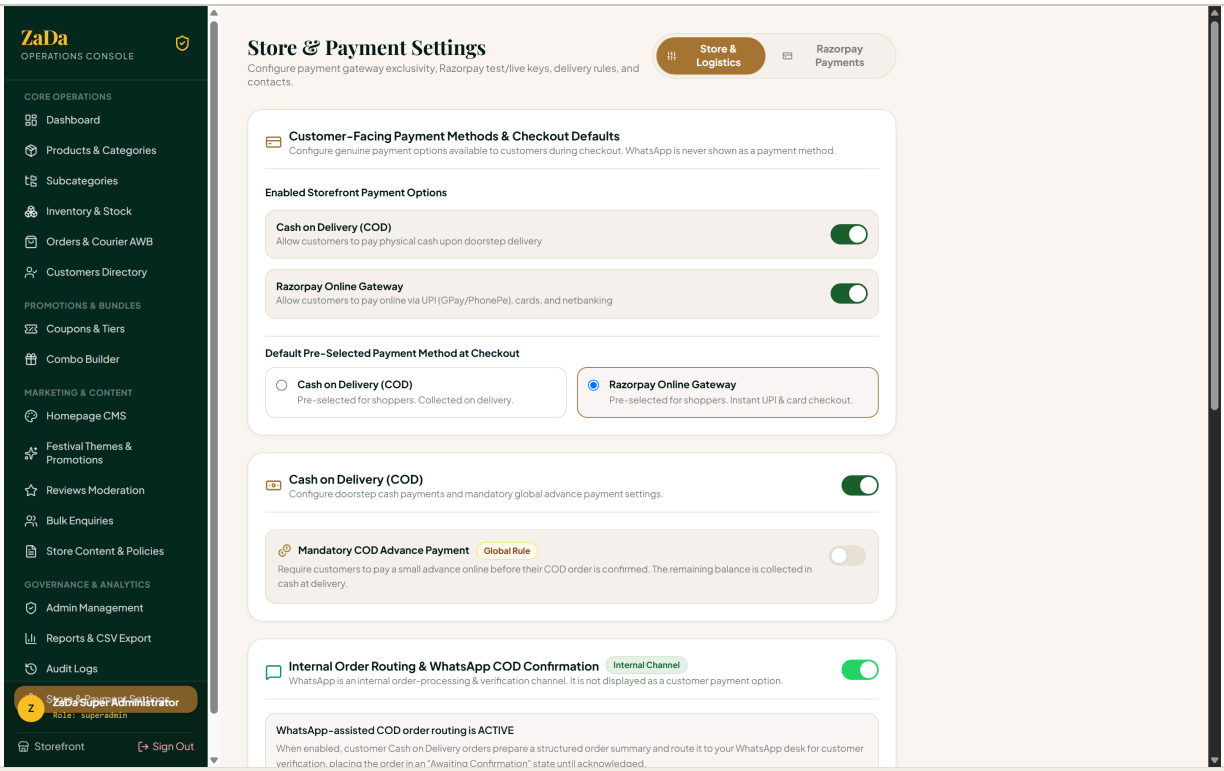

Figure 23.1: Settings console for configuring store contact details, delivery fees, free shipping limits, and COD advance requirements.

SECTION C: OPERATIONAL RUNBOOKS & SOPs

This section provides step-by-step procedures and checklists for daily, weekly, and seasonal operations.

24. Daily Order Fulfillment Runbook

1. **Morning Order Review (09:00 AM)**
   Log in to the Admin Console > Orders. Filter by **Pending** orders placed overnight. Verify payment status (Razorpay capture ID or COD advance confirmation).

2. **Generate Packing Slips & Pick Stock (10:00 AM)**
   Pick items from the spice and snack inventory. Ensure all packs match weight specifications and have clean air-tight vacuum seals.

3. **Package & Apply Shipping Labels (12:00 PM)**
   Pack items in durable, food-grade corrugated boxes. For COD orders, attach the invoice highlighting the exact balance to collect at the doorstep.

4. **Courier Handover & AWB Entry (03:00 PM)**
   Hand over parcels to the courier pickup executive. Enter the AWB tracking numbers into the Admin Orders panel and transition status to **Shipped**.

25. Handling COD Advance & Balance Collection

Cash on Delivery Reconciliation Protocol:

- **Advance Collection:** When a customer selects COD, the system collects a mandatory token advance (e.g. ₹60 or 15%) via UPI/Razorpay to confirm intent and prevent fake orders.
- **Invoice Balance Display:** The customer invoice clearly states: `Total Amount: ₹850 | Advance Paid: ₹60 | Balance Due at Delivery: ₹790`.
- **Doorstep Collection:** The courier delivery agent collects the remaining balance in cash or UPI QR upon delivery.
- **Reconciliation:** Weekly courier remittance reports should be checked against the Admin Orders directory to confirm payment settlement.

26. Store Operator Maintenance Checklists

Daily Checklist (Every Morning):

- [ ] Review overnight orders and check for flagged or pending payments.
- [ ] Check *Inventory* > *Low Stock Alerts* to schedule batch repacking for fast-moving spices.
- [ ] Check *Bulk Enquiries* and respond to wholesale buyers via phone or WhatsApp.
- [ ] Review customer WhatsApp inquiries at +91 75939 59235.
- [ ] Moderate pending customer reviews in *Reviews Moderation*.

Weekly Checklist (Every Monday):

- [ ] Perform a physical stock count audit against system inventory counts.
- [ ] Export weekly sales CSV from *Reports* for bookkeeping.
- [ ] Reconcile courier COD remittance settlements against delivered orders.
- [ ] Review coupon code performance and deactivate expired promotional codes.

Emergency Troubleshooting & Escalation:

Incident	Immediate Action	Escalation Contact
Customer payment debited but order not created	Check Razorpay Dashboard with customer email/phone. If captured, manually create order or issue refund.	accounts@zadafoods.com
Product out of stock physically but active online	Immediately set product variant stock to `0` in *Admin* > *Inventory*. Contact affected customers to offer replacement or immediate refund.	operations@zadafoods.com
Courier tracking link not updating after 48 hours	Raise support ticket with courier account manager using the AWB number. Update customer via WhatsApp concierge.	care@zadafoods.com
Store Administrator password locked out	Use the "Forgot Password" self-service link on the login page or contact the Super Administrator.	admin.zadafoods.superad@gmail.com
